

Access to Nursing

Mary Seacole

Many thanks for having me on the course, it was a fantastic experience which I was able to learn so much about the anatomy of the human body and loads more.

The Access to nursing and midwifery course has truly prepared me for my next level. I was able to understand what has been taught in my first few weeks at university only because I did the Access course. This took the stress and nervousness out of me.

Access to nursing and midwifery including study skills has helped my concentration with better thinking and has enabled me to prepare myself with learning materials and resources and how to adapt to learning as well as society.

A big thanks to Bridgette and MIComputolutions for the support I received. Bridgette and the team of tutors supported and encouraged me to do the assignments to the best of my ability while at the same time helping me to do better. They helped me to become more confident, improve my writing and analytical skills. One thing I did not expect but is such a good thing, is my report writing in my part time job has improved and I am doing this more confidently.

I now believe I can do my degree well, be successful at it and perform better in my part time job. This team is a God sent!!
