

Habiba Qummar

So, let this story be a testament to the power of an institution like MI Computsolutions, and the journey it sets in motion. A journey from student to teacher, from apprentice to master, a journey paved with challenges and triumphs, ultimately leading to the greatest reward of all: the happy fulfilment of a teacher's life.

Absolutely! Here's a story about my journey from the halls of MI Computsolutions to where I am now, brimming with happiness and teaching a new generation: It began not just with Level 1 English & Mathematics, but with the spark of an educator's soul igniting within me. The dusty textbooks and echoing classrooms weren't just about passing exams; they were my training ground, where I honed my skills, not just in language and numbers, but in the art of guiding, the magic of knowledge shared.

The next chapter I take flight, not as a student, but as a Teaching Assistant. My first school, second from last, might not have been the grandest, but it held the raw beauty of beginnings. Here, I faced my first nervous whispers on the podium, the exhilaration of seeing a concept click in a student's mind, and the immense responsibility of shaping young minds.

Each lesson was a dance, balancing knowledge with kindness, discipline with encouragement.

One and a half years later, I stood on the other side of the stage, confident, polished, and a master of my craft.

My current school might be closer to the top, MI Skills Development Centre (MI ComputSolutions) Legacy: Looking back, my trace of my success back to those early days wasn't just the academic foundation, but the values absorbed. The spirit of perseverance, the belief in every student's potential, and the dedication to making a difference in their lives. These pillars form the bedrock of your teaching philosophy, the guiding light in my classroom. All my teachers inspired me specifically Blessing, Laurent, and Muhammad and supporting staff Slimane and Mofeayo they are like a core to my journey.

Also a big thank to Bola who built this MI Skills Development Centre (MI ComputSolutions) and helping us with our future and career.
